

Day 12 – Revision & Consolidation

Mindset & Plan Check:

- Goal: Become DevOps Engineer
- Linux basics improving
- Need more troubleshooting practice
- Focus next: real scenarios + daily practice

Processes & Services:

Commands used:

```
ps aux | grep nginx
systemctl status nginx
journalctl -u nginx -n 20
```

Observations:

- Nginx running
- Service active
- Logs helpful for debugging

File Skills Practice:

```
echo "Revision Day" >> notes.txt
chmod 755 notes.txt
sudo chown sahil:sahil notes.txt
ls -l notes.txt
```

Observation:

Permissions & ownership updated

Top 5 Commands:

```
ls -l
ps aux
systemctl status
df -h
journalctl -u
```

User/Group Check:

```
sudo useradd testuser
id testuser
sudo chown testuser:testuser notes.txt
```

Verified using `ls -l`

Self Check:

1. Most useful commands:

`ls -l`, `systemctl`, `journalctl`

2. Service health:

`systemctl status`

ps aux
journalctl logs

3. Safe permissions:

chown + chmod
verify with ls -l

4. Next 3 days:

- Troubleshooting*
- Nginx debugging*
- Logs practice*

Key Takeaways:

- Practice needed for speed*
- Logs are powerful*
- Permissions are critical*
- Move from learning to applying*
